

Letter of recommendation

Monday, August 03, 2020

Medeshov Kayrat Duishenovich has done his final qualifying work under my mentorship. The topic of his bachelor's work was "Creation of an automated system for private emergency service". Kayrat Duishenovich was able to competently deal with the task at hand, analyze the subject area, collect the necessary material and consequently create a web-interface. The results of the work were the analysis of the subject area, the user interface model, the database scheme and interactive prototype of the software module. During the implementation of the diploma project, Kayrat independently researched a problem area of an organization by doing interview with real users of an app.

A very important factor of the successful work on the bachelor's degree project was the use by Kayrat Duishenovich of the teamwork skills acquired during his studies at the university. He has ability to fit into any group of people, in addition to his hardworking skill and motivation. Kayrat Duishenovich project was part of a larger one, for which it was necessary to work with other developers in the team. In particular, work on the project was carried out using agile development methods, tasks were completed and monitored during weekly sprints. The Trello service was used to manage the team work.

In general, Kayrat Duishenovich proved to be a competent specialist, able to understand new technologies, collect requirements for a software product, and enthusiastically work in a team. I recommend Medeshov Kayrat Duishenovich as a student for master's degree program for leading university and as web developer for high-tech company.

Candidate of Engineering Sciences, Professor of the Department of Systems of artificial intelligence

Institute of Space and Information Technologies SibFU
